Flock Safety x Aerodome

Commander Cohen,

You've told our team time and time again that you need cutting-edge tools that help you stop crime and keep communities safe. Today, we're excited to share the next chapter in that mission.

We're All In on Drones as a First Responder (DFR).

We've acquired Aerodome, a pioneer in Drones as a First Responder technology. They have by far the most intuitive and powerful DFR software on the planet. And with Flock's expertise in hardware, computer vision, and commitment to launch new features based on your input, the future of real-time policing just became real.

Imagine, you receive a gunshot alert from your fleet of Raven devices and you're not sure if patrol can get there in time. With DFR, you'll get eyes on the scene in seconds, saving lives and making arrests. Or you pull over a vehicle associated with a hot list hit from your

Flock LPR, and the suspect decides to run, but a chase gets called off for being too dangerous. DFR will keep eyes on the suspect vehicle until you find a safer place to intercept. And just like today, your entire team will be able to see that info wherever you need it - from a computer screen in Dispatch to the officer's MDT or mobile device. Flock drones will integrate seamlessly with all of Flock's existing tools, so your officers and deputies will know exactly the risks and challenges of the scene ahead.

We are building the future of public safety, together—where rapid response becomes the standard, and incidents can be addressed in real-time.

What does this mean for you?

You already know about FlockOS, the most powerful real-time policing software that supports thousands of agencies across the country. And starting in 2025, we'll be launching a fleet of **American-made, NDAA compliant drones** designed specifically for law enforcement needs. The best part? We're growing our team.

With this acquisition, we're not only expanding our product lineup, but also investing heavily in your future. We're hiring over a hundred world-class engineers — experts who will help us refine and enhance every aspect of our technology. This means **more innovation, better service**, and faster response times to your needs.

What's next?

Over the coming months, we'll be sharing more details about the launch of our drone program, how it integrates with your current Flock systems, and what you can expect in 2025. We're excited for the future, and we can't wait to bring these innovations to your department.

Want to learn more? Head to our booth at IACP or sign up for our DFR webinar on November 13.

Thank you for your continued trust in Flock Safety. Together, we're not just solving crimes —we're preventing them.

Onward,
Garrett Langley
CEO, Flock Safety
